Remarks

- ▶ All results are based on local GAAP
- ▶ GEV reflects the present value of amounts deemed to be distributable to shareholders
- ▶ MCEV is based on stochastic cash flow projections using market consistent capital market scenarios and an allowance for liquidity premiums. The MCEV allows for management actions (e.g. in respect of profit participation and asset allocation) and policyholder behaviour
- ▶ Assumed policyholder profit participation allows for local supervisory laws and contractual agreements and current company practice
- ▶ Best estimate actuarial assumptions for expenses, mortality, etc.

Scope of GEV-Reporting:

- ▶ Group Embedded Value (GEV) calculated as Life & Health (L&H) MCEV plus Adjusted Net Asset Value (ANAV) for Property & Casualty (P&C)
- ▶ Calculation of P&C ANAV for the first time: Sparkassen Versicherung AG in Austria
- ▶ Change to Market Consistent Embedded Value^{©1} Principles
- ▶ MCEV for L&H: Adjusted Net Asset Value (ANAV) plus Value of In-Force (VIF) determined as Present Value of Future Profits (PVFP) minus Time Value of Financial Options and Guarantees (TVFOG) minus Frictional Cost of Required Capital (FCRC) minus Cost for Residual Non-Hedgable Risks (CRNHR)
- ▶ ANAV for P&C includes Surplus in Claims Reserves based on undiscounted actuarial best estimates of claims payments and Surplus in Unearned Premium Reserves
- ▶ Methodology, assumptions and calculations reviewed by B&W Deloitte GmbH, Cologne
